

WHAT'S
NEW?

Chipboard Pizza Squares

Chipboard is made from small wood particles mixed with resin, binders, and other additives, which are then pressed together under high temperatures with high amounts of pressure. It is thicker than normal paper but doesn't have flutes like corrugated boxes. Chipboard normally comes in a single-layer material and comes in a variety of sizes.

- ▶ Chipboard pizza squares reduce grease soak through and maintain crust integrity
- ▶ Cost Efficient: Lower production and shipping costs.
- ▶ Better for Storage: Takes up less space when being stored compared to other packaging products.
- ▶ Protection: The density of the material gives strength and protection
- ▶ Environmental Factors: It is made from recycled material. The energy used to create this product is far less than other packaging options.
